IN-PLATFORM SUCCESS GUIDE

WORKFLOW OVERVIEW

NEW CLEAN ROOM

- Client creates a dataset at the organizational level.
- Upon receiving and accepting clean room invite, client configures the dataset at the clean room level within the desired clean room.
    - During this clean room configuration process, client can filter for specific audiences they intend to use for reporting/activation.
- Once clean room configuration is complete, client notifies Disney of the new dataset and audience(s).
- Disney will kick off the desired questions within the clean room for Pre-Planning Insights, Activation, or Measurement and notify client that they are now able to assign their dataset to each question.
- Client notifies Disney that their dataset has been assigned to each question.
- Disney runs the questions and notifies client of results.
- Repeat the above steps if additional datasets are required.

Confidential. Property of Disney Advertising Sales, LLC. Not for Distribution.

IN-PLATFORM SUCCESS GUIDE

WORKFLOW OVERVIEW

NEW QUESTION

- Client requests new question from Disney.
- Disney to notify client when new question is available within the clean room.
- If a new dataset is required, client repeats steps to create a dataset at the organizational level and configure the dataset at the clean room level.
- Once complete, client assigns the dataset to the new question and notifies Disney.
- Disney runs the new question and notifies client of results.

IN-PLATFORM SUCCESS GUIDE

STEP BY STEP INSTRUCTIONS

CREATING A DATASET - ORGANIZATIONAL LEVEL

- From homepage, Go to Data Connections within Data Connections window.
- + New Data Connection (top right).
- “Before you begin” page
  - Select Data Source = Snowflake Data Connection
  - Select Dataset Type = Generic
  - Start
- “Configure Datasource” page
  - Credentials = Snowflake Account
  - Job Name = Database Name.Schema Name.Table Name
  - Category = DB (this field is not used past this step)
  - Database Name = Enter exactly as it appears in Snowflake Account
  - Schema Name = Enter exactly as it appears in Snowflake Account
  - Table/View Name = Enter exactly as it appears in Snowflake Account
  - Next Step
- Ensure accuracy and select Save.
- The new data connection should now appear in the Data Connections tab and will take several minutes for the Configuration Status to change from Pending to Mapping Required.
- Once Configuration Status has changed to Mapping Required, select Mapping within the square of the newly created data connection. Note: If page is blank, it may take a few more minutes before proceeding.
- The column headers should appear on the Map Fields page. No further action is required on this page unless the dataset has a field delimiter, which it should not. Select Next.

(Instructions continued on next page)

IN-PLATFORM SUCCESS GUIDE

STEP BY STEP INSTRUCTIONS

CREATING A DATASET - ORGANIZATIONAL LEVEL

- You can now select the Data Type for each column. ID and Audience fields would typically be String. Dates for conversion data would typically be Date. Select appropriate Data Type for any additional columns.
- For ID column, turn User Identifier toggle to green and select appropriate identifier from the drop down. Once selected, Save.
  - If identifier is hashed email, select SHA256 Hashing Algorithm
  - If identifier is maid, select Mobile Device Identifier
  - Save
- It may take several minutes for the Configuration Status to change to Complete, at which point you can then select View Details within the square of the data connection to ensure accuracy.

NOTE:

- Once a dataset is created, any updates made within the linked Snowflake account will automatically refresh within the Habu platform.
- Once a dataset has been created, you will not be able to add additional columns. A new dataset would be required to add extra fields.

IN-PLATFORM SUCCESS GUIDE

STEP BY STEP INSTRUCTIONS

CONFIGURING A DATASET – CLEAN ROOM LEVEL

- Now that a dataset has been created at the Organizational level, navigate to the clean room by selecting Go to Clean Rooms from the homepage, and then Details within the square of the desired clean room.
- Select Datasets from the menu on the left-hand side.
- Find the desired dataset and select Configure.
- From this screen you can filter for any desired audience(s) that you would like to use for reporting/activation.
    - If no filtering is required, select Complete Configuration.
    - If filtering is required, you can filter for a single or multiple audiences within the Audience field. Spaces are permitted in the audience name(s).
        - For single audiences, Operator would be Equals. Values would be the audience name exactly as it appears within the Snowflake account. Example: AUDIENCE Equals ABC 123
        - For multiple audiences, Operator would be In. Values would be the audience names exactly as they appear within the Snowflake account. **Use commas to separate audiences.**
          Example: AUDIENCE In ABC 123, DEF 456, GHI 789
        - Once desired values have been entered, select Complete Configuration.
- It will take several minutes for status to change from Pending to In Progress to Complete.
- Once Complete, the dataset can now be assigned to Questions.

NOTE: Datasets can be configured multiple times to filter for different audiences. You would just locate the desired dataset in the Datasets tab, select Edit, and follow the same steps above to filter for desired audiences.

IN-PLATFORM SUCCESS GUIDE

STEP BY STEP INSTRUCTIONS

ASSIGNING A DATASET TO A QUESTION

- Now that a dataset has been configured at the Clean Room level, it can be assigned to Questions within the clean room.
- Disney will kick off the questions for Pre-Planning Insights, Activation, or Measurement.
- Once the questions are available within the clean room, select Manage Datasets within the square for the desired question.
- Select Save & Proceed.
- Select the dataset from the dropdown you would like you use. Save or Save & Proceed.
    - **NOTE**: If client does not see a dropdown at this step, please notify Disney as they must assign the dataset to the client.
- Certain questions, like Pre-DXP Activation by ID Type and DXP Activation, will require a final step to Map Fields. Select the column from the dropdown that contains the audience segment name(s). Save.

- Repeat these steps for all desired questions.
- Notify Disney of the new dataset being assigned to the questions.
- Disney runs the questions and notifies client of results.

Confidential. Property of Disney Advertising Sales, LLC. Not for Distribution.

IN-PLATFORM SUCCESS GUIDE

PERMISSIONS

ROLES

Organizational Level

- As part of Organization configuration, Account and Organization Administrators are able to manage and add new user roles. Roles are combinations of Habu permission sets that can then be assigned to individual users within an Organization.
- To create a Role, from the homepage navigate to Admin > Roles.
- Enter a Role Name. Then, under each section, select the level of permissions that user Role should include. A Role can have one or more permissionable configurations.
- All Roles will appear in the Organization Roles view. A role can be modified at any time by selecting Actions > Edit Role.
- A Role must be assigned to a user at the time of user creation and can be modified at any time.
- As a best practice, Administrators will have permissions to all available Access Levels, while Viewers will only able to view reports.

  Access Level permissions descriptions can be found below.

Access Level	Description
Clean Room Management	Add & remove Users, define & assign Roles
Manage Datasets	Configure Datasets and assign Datasets to Questions
View Reports	View-only access to question outputs
Habu Intelligence Viewer	View-only access to insights in Habu Intelligence

Confidential. Property of Disney Advertising Sales, LLC. Not for Distribution.

IN-PLATFORM SUCCESS GUIDE

PERMISSIONS

ROLES

Clean Room Level

- Similarly, Roles can be assigned within a clean room.
- When in a clean room, navigate to Access > Partners & Users.
- Within the client Disney Organization, select the button with three dots, then Manage Roles.
- An Administrator will have Access to all available permissions.
- New Roles can be created by selecting the Create Role button (top right). Select from Available Permissions and create a Role Name. Save.
- This Role can now be assigned to Users within the clean room.
- As a best practice, Administrators will have permissions to all available Access Levels, while Viewers will only able to view reports.

IN-PLATFORM SUCCESS GUIDE

PERMISSIONS

USERS

Organizational Level

- Once your Account Administrator has access to the Habu UI, additional users can be added as needed. New users to the Habu UI are set up as Organization Administrators by default.
- To Add new users, from the homepage navigate to Admin > Users.
- Select + New User (top right) and complete the new user's name and email. Here you can select a Role for the new user, which can be modified at any time.
- Select Create User. The new user will receive an email from no-reply@email.habu.com to login and create a password.
- If the user does not see the Welcome email, it may have routed to their spam folder. If you need to resend a welcome email, navigate to Admin > Users and under Actions, select Resend Invite.

Clean Room Level

- Once users have access to the Habu UI, those that require clean room access, can be enabled by navigating to the desired clean room and selecting the Partners & Users option from the menu on the left hand side.
- Select Add Users (top right).
- All users created within the Organization will display. Under the Clean Room Role column, select the role from the dropdown for the user you want to enable. Add User.

NOTE: If a user is able to access the Habu UI, but are unable to access the clean room because the Details button is gray, they have not yet been added as a user to the clean room.

IN-PLATFORM SUCCESS GUIDE

REPORT TYPES - ACTIVATION

PRE-DXP ACTIVATION

Display audience names that are currently configured within the dataset at the clean room level. Included will be total identifiers matched between Disney and the client audiences as well as the number of households ids those collapse into. This is used as a pre-requisite to ensure desired audiences are used for the DXP Activation Question.

Pre-DXP Activation Edit

Parameter	Value
Segment Col	Audience
